

03480000 – VACUUM BRAKE BLEEDER**A stand-alone brake bleeder that uses vacuum to “suck” the fluid out**

- Removes the brake fluid from the master cylinder by sucking it out of the filler.
- Fast fluid changes as not all the fluid needs to be bled via a bleed nipple
- No need to have a pressure tight seal on those difficult to get at master cylinder reservoirs.
- By “sucking” the fluid away risk of sudden spillage is significantly reduced.
- Uses standard work shop compressed air supply to generate vacuum (70 – 170 psi).
- When combined with the Automatic Brake Fluid Filler Unit (03481100), turns brake and clutch system bleeding into a genuine one man operation.
